Experience

BANK OF AMERICA (Global Markets & Consumer Banking Technology)

Software Developer IB | Acting Product OwnerProduct Strategy & Ecosystem Modernization

- Defined Product Roadmap for core banking migrations to .NET 8, scaling platforms for **18,000+** users by prioritizing features based on user-impact metrics and technical debt reduction
 - Architected GTM frameworks for OpenShift-based web applications, uniforming development environments to elevate DX and achieving a **40% reduction** in deployment lag times
 - Coordinated deployment of **150+ servers** for the Captiva Server upgrade, enabling on-time August release delivery
- Agile Product Delivery & Stakeholder Management
- Managed backlog and MoSCoW prioritization for automation tools, cutting manual effort by **2.5 hours daily** and improving team velocity for **11** cross-functional members.
 - Orchestrated the **LOSO May 2025 Product Launch**, coordinating with engineering and compliance to ensure seamless Subpoena migration and real-time data transparency via product dashboards

Jan'2024-Jun'2026
Gandhinagar

Senior Tech Associate

- Ensured **100%** operational stability of mission-critical jobs and Windows Services, maintaining zero-downtime SLAs via proactive troubleshooting
- Architected centralized technical documentation frameworks, mitigating institutional knowledge silos and enhancing team integration speed by **50%** overall

Feb'23-Dec'23
Gandhinagar

Projects**HELIX — AGENTIC AI FRAMEWORK**

- Developed a governed autonomous agent ecosystem to streamline DevOps release cycles, achieving a **30% surge** in stability and decreasing manual oversight by **40%** via intelligent automation.

Oct'2025

LOSO & GWIM MIGRATION

- Directed an enterprise-wide transition of data ingestion pipelines to scalable indexing architectures, ensuring seamless service continuity and **100% data fidelity** for users

2024-2025

Certifications

Risk Framework: Expertise in structural risk assessment and enterprise vulnerability mitigation.

Cyber Security (Software Development Security): Proficiency in secure engineering and coding standards to ensure software integrity.

Basic Threat Modelling: Capability to identify attack surfaces and proactively harden system architecture.

Kafka Fundamentals: Proficiency in data engineering and managing distributed message streams for high-throughput processing.

Design Pattern Fundamentals: Expertise in software architecture and reusable solution structures to enhance maintainability.

GitHub Copilot: Skill in integrating AI-assisted tools to accelerate code generation and development speed.

McKinsey Forward Learners Program: Advanced training in leadership strategies to drive effective organizational transformation.

Achievements

- **Silver Award:** Coordinated August release deployment and authored instruction documentation
- **Bronze Award:** Deployment planning & Splunk monitoring
- **High Five Award:** Pioneered Agentic AI solutions within the deployment lifecycle, optimizing operational workflows to reclaim **1 hour** of manual effort for the team daily
- Served as a **State-Level Debating Delegate** at ANANT 2K17, organized by the Guru Gobind Singh Foundation
